Re: Electronic Certification

**Dear Mr. David Brownlee:**

Wenck Associates, Inc. certifies that the electronic copy of the First VIRP Progress Report, dated September 1, 2016 for the Former Duluth Dry Cleaner Site, HSI Site Number 10892, Duluth, Gwinnett County, Georgia is complete, identical to the paper copy, and virus free.

If you have any questions regarding the First VIRP Progress Report or this response, please feel free to contact me at (678) 987-5854.

Sincerely,

**Wenck Associates, Inc.**

RE: Submittal of First Voluntary Investigation and Remediation Plan (VIRP) Progress Report  
Response to February 16, 2016 Comments – VIRP, HSI Site 10892  
3146 Main Street, Duluth, Gwinnett County, Georgia

**Dear Mr. Brownlee:**

Wenck Associates Inc. (WAI), on behalf of the City of Duluth is pleased to submit the First Voluntary Investigation and Remediation Plan (VIRP) Progress Report for the Former Dry Cleaner Site (HSI No. 10892) located in Duluth, Gwinnett County, Georgia. In addition, we are also providing a response to the Georgia Environmental Protection Division (EPD)'s February 16, 2016 comments on the VIRP, dated January 2016. EPD's comments and our responses are as follows:

**EPD Comment 1:** *The Application states that Corrective action is not planned for sub-surface soil because the property is intended to be maintained as an asphalt parking lot for the foreseeable future. The City intends to install environmental covenants so that the Site will remain capped with the asphalt parking lot and maintained. However, there is no mention of a maintenance and monitoring plan (MMP) to maximize the life and performance of the parking lot. A MMP will be required as part of the Type 5 Risk Reduction Standards (RRS) for the site.*

**Response 1:** Noted. A MMP will be submitted at the time of certification to a Type 5 RRS.

**EPD Comment 2:** *Please revise the three dimensional conceptual site model to better reflect conditions at the site. The following is suggested:*

- a. *Superimpose Transect A-A' and B-B' onto Figure No. 3,*
- b. *Label Figure Nos. 8 and 9 with their figure numbers, and*
- c. *Correct Transect B-B' to show the correct spatial order of the wells.*

**Response 2:** Revised VIRP Figures 3, 8, and 9 are attached to this Response to Comment Letter. In the Second VIRP Progress Report, an updated Conceptual Site Model, including updated cross-sections, will be provided.

**EPD Comment 3:** *The Application currently contains a table of delineation standards, in Section 4, that does not match all of the contaminants listed in Tables 1 and 2 and in Appendix H. The table in Section 4 must include delineation standards for all contaminants detected at the site, or a discussion of why a contaminant is not related to the release at the site. In*

Mr. Brownlee  
Unit Coordinator  
Georgia EPD  
September 1, 2016

*addition, it would be helpful to include a column for Type 1 RRS in Tables 1 and 2, even if the value is identical to the Type 3 RRS for some contaminants. Note that the soil Type 3 for tetrachloroethene and vinyl chloride should be 500 ug/kg and 200 ug/kg, respectively, in Table 1.*

**Response 3:** Noted. The delineation standard and remediation standard tables provided in the VIRP were preliminary and will be updated throughout the VRP process. In general, regulated substances that have been detected at the site but are not associated with the release from the site will not be given delineation and remediation standards. These compounds include the following:

- **Chloroform** – present in groundwater only. The presence is likely due to a leaking water line, since trihalomethanes are common in treated municipal water.
- **Acetone** – common laboratory artifact due to the reaction of organics in soil and laboratory preservative. It is not associated with a release at the Site.
- **Pyrene, fluoranthene, and benzo(b)fluoranthene** - detected in a soil sample collected immediately below the asphalt pavement. These compounds are frequently associated with asphalt and are not considered to be part of the release from the former dry cleaner (solvent).
- **Benzene and toluene** - petroleum-related compounds in groundwater highest in the upgradient portion of the site and present in a few wells at low concentrations. These compounds are not associated with the release from the dry cleaning operations.

The Second Progress Report will include a summary of the delineation and remediation standards, as the City is considering calculating Type 4 RRS as the remediation standard for the Site.

Should you have any questions, or need clarification of anything presented in the attached proposal, please do not hesitate to call me at 678-987-5854.

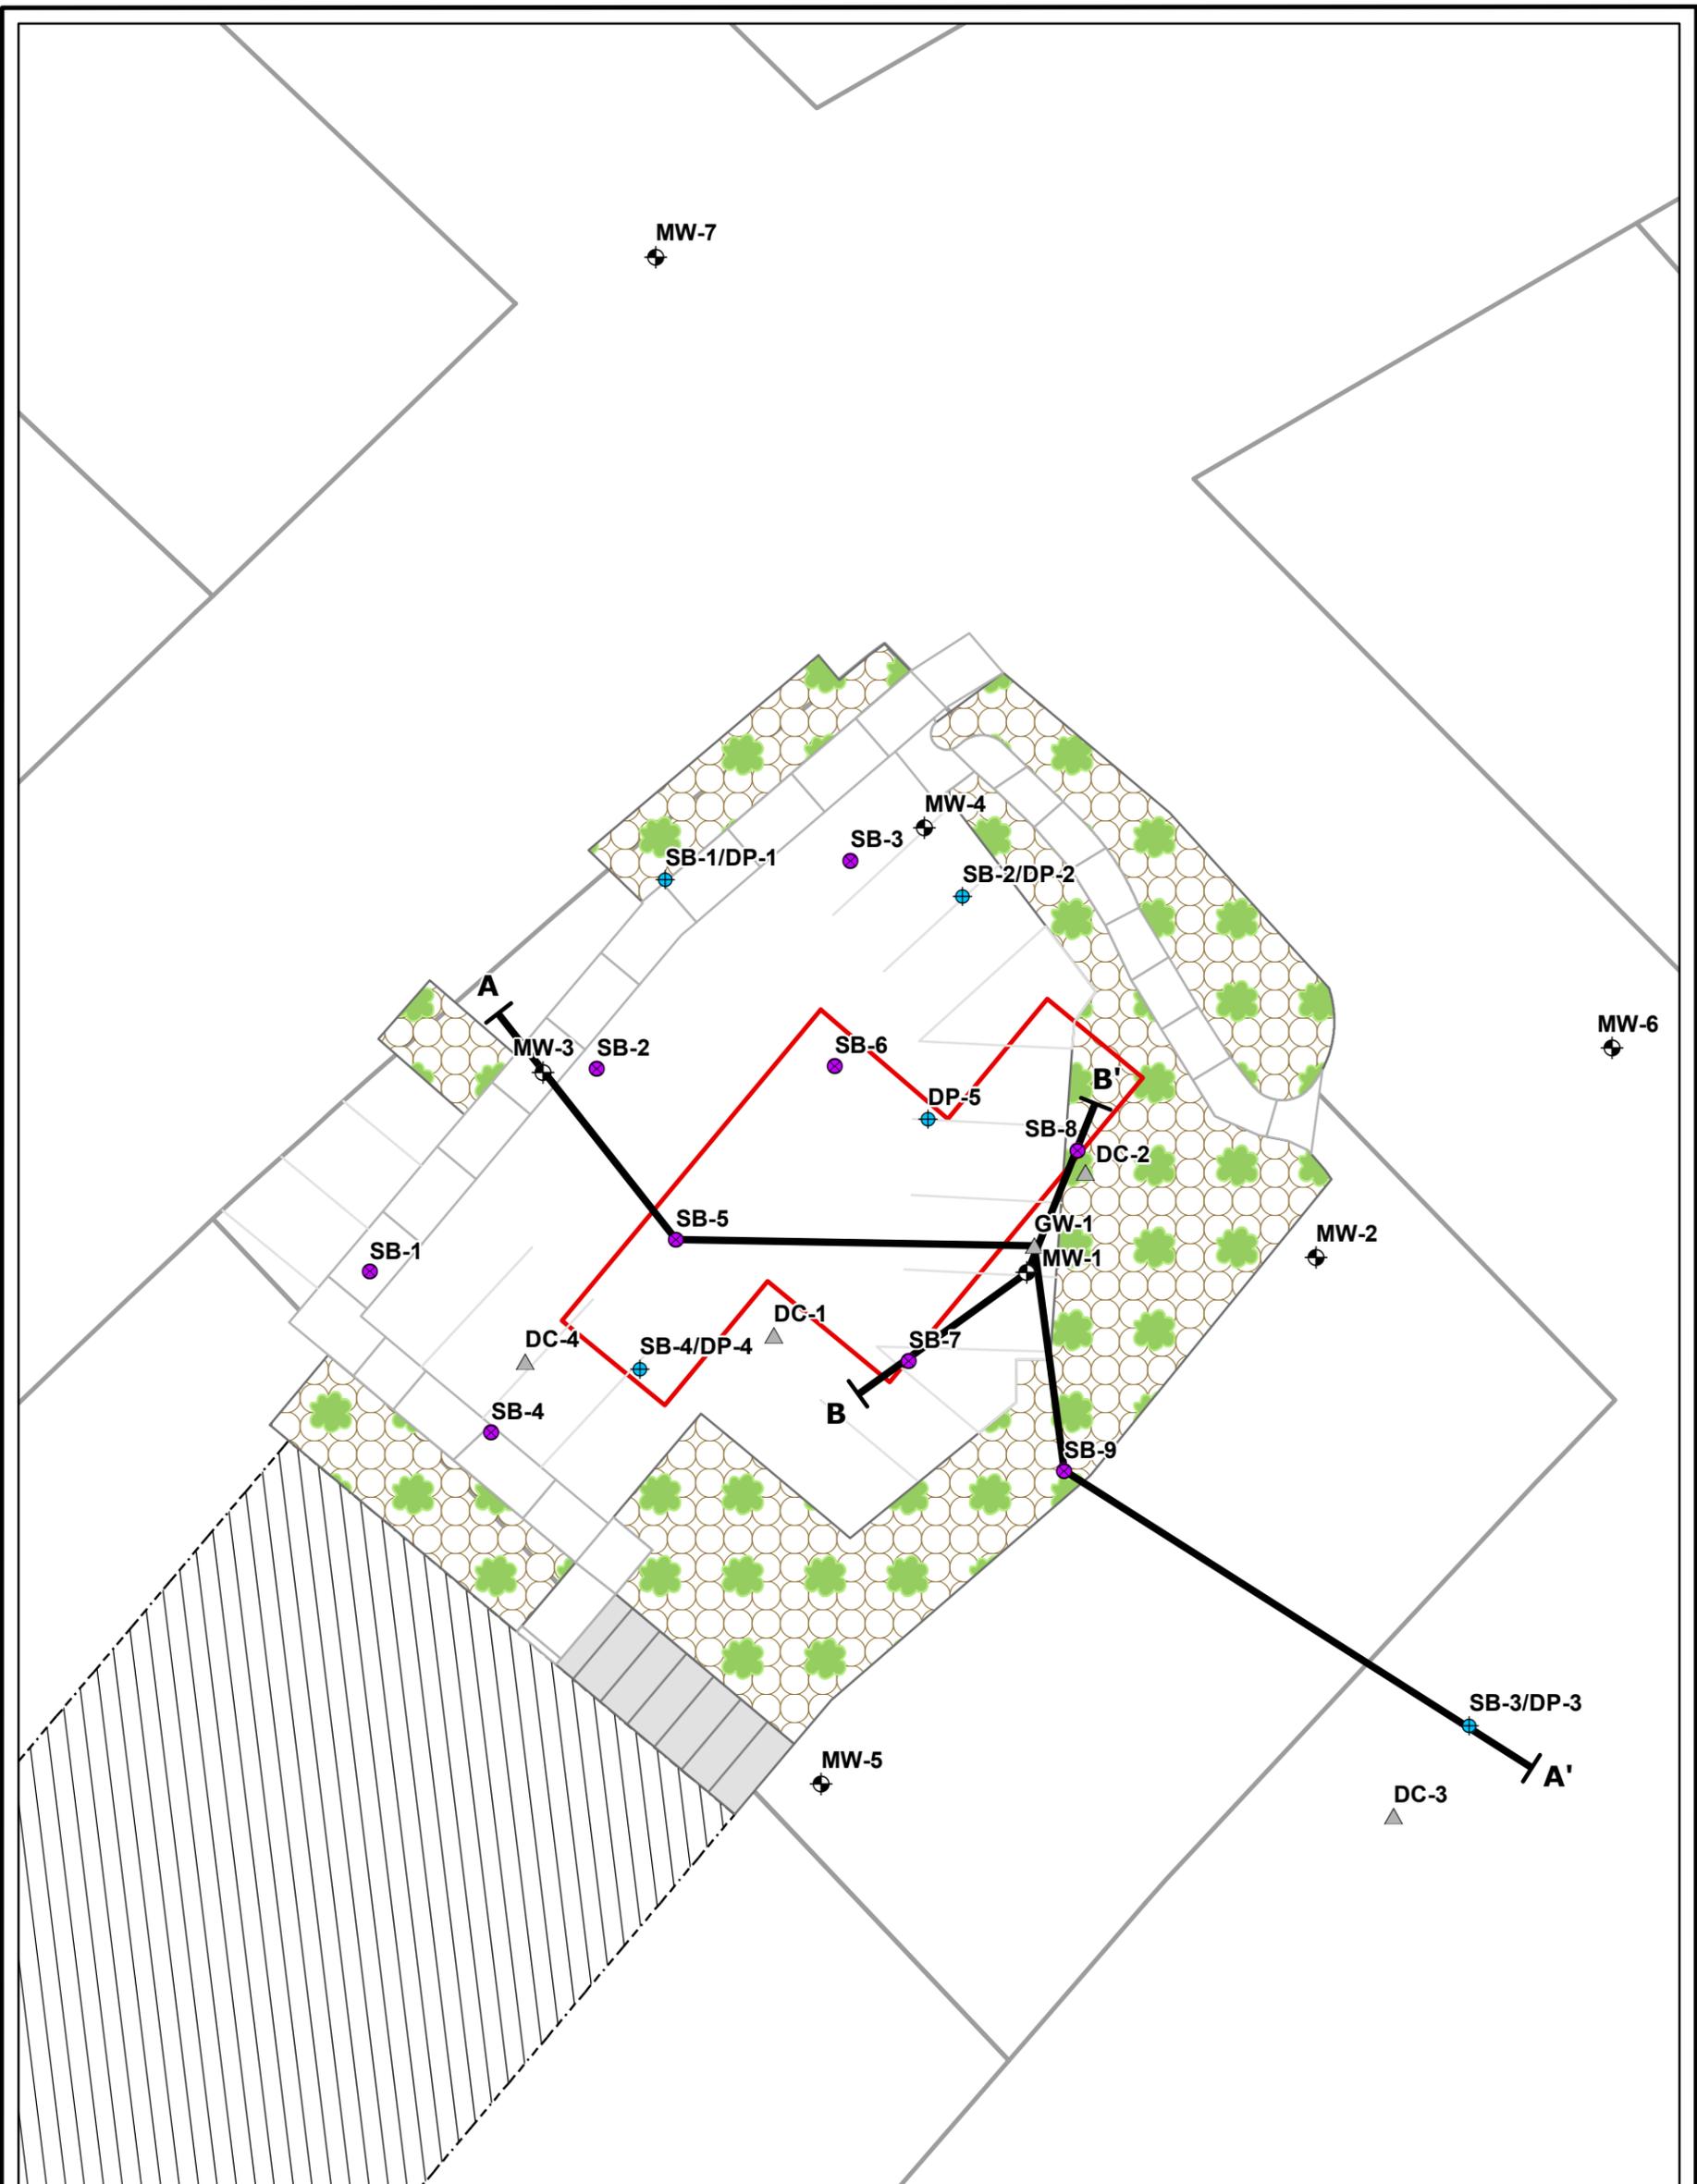

Sincerely,

**Wenck Associates, Inc.**

State of Georgia

# 1.0 Introduction

---

Wenck Associates, Inc. (Wenck) was authorized by the City of Duluth to implement the Voluntary Investigation and Remediation Plan (VIRP), which was submitted in January 2016 and approved by the Georgia Environmental Protection Division (EPD) in a letter dated March 4, 2016. The site is currently owned by the City of Duluth. The site consists of one parcel located at the intersection of Main Street and Knox Drive in Duluth, Georgia (the Site). The location and topography features of the Site are presented on **Figure 1**. A Site Plan is presented as **Figure 2**.

This First VIRP Progress Report provides a summary of the activities conducted at the Site from January 2016 through August 2016.

## 1.1 SUMMARY OF SITE ACTIVITIES

The following scope of services performed by Wenck between July 2016 and August 2016:

- ▲ Cleared public and private utilities;
- ▲ Completed four (4) soil borings on and off-site to assess current soil and groundwater conditions;
- ▲ Observed soil recovered from the soil borings, created soil boring logs, and field-screened soil for the presence of volatile organics with a photoionization detector (PID);
- ▲ Installed four (4) monitoring wells (MW-5 through MW-8) to assess current groundwater conditions and created well installation logs;
- ▲ Performed development on monitoring wells MW-5 through MW-8;
- ▲ Collected a total of eight (8) groundwater samples in August for analysis of VOCs;
- ▲ Surveyed the new monitoring wells (MW-5 through MW-10); and
- ▲ Prepared this report.

In addition to the above Site Investigation work, a Phase II Environmental Site Assessment was performed by Piedmont Geotechnical on a site located northwest of the Site, commonly referred to as the Hill Street Property (the Hill Street Phase II ESA). The field investigation and results of the Hill Street Phase II ESA are being presented to EPD as part of this VIRP Progress Report, because the investigation and results provide supporting data and delineation of the Site plume to the northwest of the Site.

The Hill Street Phase II completed the following investigation scope of services in January 2016 that are incorporated into this VIRP Progress Report:

- ▲ Installed, developed, and sampled two (2) permanent monitoring wells (MW-9 and MW-10, see Figure 2) and three (3) temporary monitoring wells (see Appendix A) to evaluate environmental conditions.

## 2.0 Site Background

---

### 2.1 HISTORICAL ACTIVITIES

A dry cleaning business operated at the Site from 1975 to 1993. The dry cleaner closed in 1993, and the existing building was used to operate a woodworking shop from 1993 to 1998. As a result of the historic operation of a dry cleaner at the Site, a release of the dry cleaning solvent chlorinated volatile organic compounds (cVOCs), namely tetrachloroethene (PCE) and its daughter products, have impacted soil and groundwater. The cVOCs have impacted onsite soil and groundwater and are migrating down-gradient of the Site to the west north-west.

In 1998, the building was demolished and converted into a parking lot. In 2000, the City of Duluth purchased the Site. The Site was sold to EJT Downtown, LLC in 2007. The original discovery of the release occurred in 2008 during a Phase II Environmental Site Assessment (ESA) performed by Ahlberg Engineering, Inc., (AEI) which reported PCE and other compounds in soil and groundwater at the Site in the vicinity of the former dry cleaning building.

The EPD determined that a release exceeding a reportable quantity had occurred at the Site based upon information provided in the release notification dated April 4, 2008. The City of Duluth re-acquired the property in 2014 and is now the current owner of the Site. Following the listing on the HSI, limited sub-surface investigations were conducted in 2010 by the US Army Corps of Engineers (USACE) and in 2015 by Wenck. These activities, along with the 2008 Phase II, are summarized in the VIRP prepared and submitted by Wenck in January 2016, which was approved by the GA EPD in March 2016.

### 2.2 SITE GEOLOGY AND HYDROGEOLOGY

According to the 2010 Brownfields Assessment, the uppermost hydrologic unit in the area of the Site is an unconfined surficial aquifer which is comprised of a saprolite-bedrock aquifer. The saprolite-bedrock aquifer is recharged by rainfall and discharges into streams in valley bottoms. The saprolite stores and transmits water in the pore spaces between the soils (clays, silts, and sands) that comprise the saprolite. The saprolite has a much higher storage capacity but lower transmissivity than the underlying bedrock. The bedrock stores and transmits water through secondary porosity features (fractures, joints, and faults). The bedrock can be capable of transmitting very large volumes of water; the transmissivity depends on the density and orientation of the secondary porosity features. Based on the local topography in the area of the Site, shallow groundwater is expected to flow in a western direction.

Specific hydraulic characteristics of the Site have not been evaluated as part of these VIRP field activities; however, slug testing will be performed in the next reporting period to determine the hydraulic conductivity of the site. Based on the soil type at the Site, the hydraulic conductivity is expected to be between  $10^{-3}$  to  $10^{-5}$  cm/s.

## 3.0 Investigation Activities

---

During the reporting period, temporary and permanent monitoring wells were installed on property owned by the City of Duluth. Two monitoring wells and three temporary wells were installed on the Hill Street Property as part of a real estate transaction and reported in the Hill Street Phase II ESA, see **Appendix A**. Additionally, four monitoring wells were installed by Wenck near the former dry cleaner site to assist with off-site delineation of the shallow groundwater plume.

Well installation and groundwater sampling were performed in general accordance with the USEPA Region 4 FBQSTP procedures for well installation and groundwater sampling. Procedures for groundwater sampling activities followed Wenck's standard operating procedures. Standard operating procedures were adhered to with no deviations during the implementation of the work. Methods and procedures are described below.

### 3.1 GROUNDWATER

#### 3.1.1 Hill Street Monitoring Well Installation

As part of a real estate transaction to sell the Hill Street property (**Figure 2**), a limited Phase II ESA was conducted in January 2016. On behalf of the purchaser, Piedmont Geotechnical Consultants, Inc., (PGC) installed two permanent and three temporary groundwater monitoring wells on the Hill Street property to evaluate if the Hill Street property had been impacted by the release to groundwater at the former dry cleaner property.

According to the PGC Limited Phase II ESA, a drill rig was mobilized to the Hill Street property to install the groundwater monitoring wells on January 11, 2016. The boreholes were drilled using a 3.25-inch inner diameter (ID) hollow-stem auger. The two permanent groundwater monitoring wells were designated MW-01 and MW-02 by PGC; however, these wells are being re-named as MW-9 and MW-10, respectively, for the purposes of this Semi-Annual Progress Report. The three temporary groundwater monitoring wells were designated TMW-03, TMW-04, and TMW-05. The locations of MW-9 and MW-10 are presented on **Figure 2**.

The groundwater monitoring wells were installed as threaded, two-inch diameter PVC wells with 10 feet of screen. Temporary wells TMW-03 and TMW-04 were installed at 15' below ground surface (bgs), and TMW-05 was installed at 20' bgs. MW-9 was installed at total depth of 25' bgs, and MW-10 was installed at a total depth of 16' bgs. The wells were developed by removing five to ten gallons of water from each well. The method used to develop the wells was not specified in the PGC report. A copy of the PGC Limited Phase II ESA with well installation detail is provided in **Appendix A**.

#### 3.1.2 Hill Street Groundwater Sampling

According to the PGC Limited Phase II ESA, the Hill Street property wells were sampled using dedicated disposable bailers. The samples were analyzed for volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs) using EPA Method 8260B and 8270D, respectively. Groundwater sampling logs were not provided in the PGC Limited Phase II ESA.

### 3.1.3 Main Street Monitoring Well Installation and Development

Four monitoring wells (MW-5 through MW-8) were installed by Wenck from July 24 to July 25, 2016. The locations of these wells were selected based on site access and underground utilities. Due to underground power and water lines in the right-of-way along Main Street, MW-8 was located on a topographic high in the City green (**Figure 2**). Additionally, beyond the southern property boundary is the railroad right-of-way. Several underground powerlines are present in the City of Duluth's southern property boundary. Therefore, MW-5 provides delineation on the southwestern portion of the Site.

The groundwater monitoring wells were installed as threaded, two-inch diameter PVC wells with 10 feet of screen. MW-5 and MW-6 were installed at 30' below ground surface (bgs), MW-07 was installed at 35' bgs, and MW-8 was installed at 64' bgs. MW-8 was temporarily installed at 45 feet, but groundwater recharge did not occur within an hour. Therefore, the boring was advanced until evidence of groundwater occurred (wet soils).

Each well was developed by purging no less than five well volumes from the well. Well installation and development logs are presented in **Appendix B**.

### 3.1.4 Main Street Groundwater Sampling

Groundwater sampling was completed from July 27 to August 1, 2016. Groundwater sampling was performed in general accordance with the USEPA Region 4 FBQSTP procedures for groundwater sampling. Groundwater was purged with generally no less than three well volumes being purged from each well. The samples were collected in laboratory supplied bottles, placed in a cooler with ice, and submitted under chain-of-custody control to Pace Analytical for laboratory analysis.

### 3.1.5 Decontamination and Disposal Activities

All investigation-derived waste (soil cuttings, development and purge water) was drummed for off-site disposal. Ten drums of soil cuttings and two drums of decontamination water were disposed off-site by EQ Industrial Services on August 3, 2016. Waste manifests documenting disposal are presented in **Appendix D**.

### 3.1.6 Surveying

The newly installed wells were surveyed by a Precision Planning, Inc., a licensed surveyor, and static groundwater elevations were recorded. A summary of water levels and elevations are presented on **Table 2**. Groundwater was measured to be towards the west across the City green and toward City Hall (**Figure 4**).

## 3.2 GROUNDWATER FLOW DIRECTION

Depth to groundwater at wells MW-1 through MW-8 was measured using a water level indicator. All measurements were recorded to the nearest 0.01 foot. Groundwater elevations were calculated using top of casing elevations presented in the VIRP and in this report. A summary of the depth to water and groundwater elevations are provided in **Table 2**. Based on the current data, groundwater appears to be flowing to the west. The gradient is 0.009 feet/foot. The potentiometric surface map is illustrated on **Figure 3**.

## 3.3 ANALYTICAL RESULTS

Groundwater sampling took place in January 2016 (MW-9 and MW-10) and in late July and early August 2016 (MW-5 through MW-8). Groundwater samples were collected and were

analyzed for VOCs (EPA Method 8260B). PCE was detected in monitoring wells MW-1 through MW-6 at concentrations above the Type 3 RRS of 5 ug/L. Concentrations at MW-1 and MW-2 exhibited the highest PCE and PCE daughter products (cis-1,2-dichloroethene and trans-1,2-dichloroethene). PCE was detected at the highest concentration at MW-1 at 14,000 ug/L and MW-2 at 2,200 ug/L and were generally consistent with previous PCE concentrations. MW-6 reported PCE at 7.5 ug/L, which is slightly above the Type 3 RRS. MW-5 reported PCE at 32 ug/L. MW-1 and MW-2 also reported the highest concentration of daughter products, such as trichloroethene (TCE), cis-1,2-dichloroethene, and trans-1,2 dichloroethene. Benzene, chloroform, and toluene were detected in MW-1 at concentrations similar to those detected in October 2015. Vinyl chloride was not reported in any groundwater samples. VOCs were not detected in nearby off-site wells located north of the property (MW-7, MW-8). Additionally, with the exception of chloroform (not related to Site contaminants of concern) at TMW-4, VOCs were not detected in groundwater at the Hill Street Property (MW-9 or MW-10, TWM-3, TMW-4, and TMW-5).

Groundwater sample results are summarized in **Table 1**. Laboratory reports and supporting chain-of-custody documentation are included in **Appendix C**.

### 3.4 EXTENT OF IMPACTS

Based on the analytical results, PCE is delineated in shallow groundwater to the north. MW-8 was installed deeper than originally planned due to lack of groundwater recharge during well installation. However, based on the absence of PCE and daughter products in MW-7, MW-9, and MW-10, a shallow well is not recommended at that location. PCE is only slightly above the Type 3 RRS to the east at MW-6 with a concentration of 7.5 ug/L. MW-5 is located along the southwestern property boundary with a concentration of 32 ug/L. The vertical extent and western limit of the groundwater plume is currently unknown.

## 4.0 Recommendations and Schedule

---

Based on the most recent groundwater results, access limitations, and underground utilities, additional off-site delineation of the shallow groundwater plume is recommended to the west of the property. Additionally, additional onsite activities are planned. Activities planned for the next six-month reporting period (September 2016 through February 2017) include the following:

- ▲ Install one shallow well due west of the Site in the grass lot adjacent to the building to complete delineation of the shallow groundwater plume;
- ▲ Install one deep well clustered with MW-3 to determine the vertical extent;
- ▲ Perform slug tests and analysis to determine the hydraulic conductivity;
- ▲ Collect soil gas samples to evaluate the vapor intrusion pathway for the building west of the former dry cleaner site;
- ▲ Perform site-wide groundwater sampling for VOCs and geochemical parameters (MW-1 and MW-2) in February 2017;
- ▲ Survey the new monitoring wells (MW-11 through MW-12);
- ▲ Update the conceptual site model (CSM); and,
- ▲ Prepare the Second VIRP Progress Report.

The Second VIRP Progress Report will be submitted by March 2, 2017.

Attention: Mr. Will Kelley

Subject: **Limited Phase II Environmental Site Assessment**  
Hill Street Development  
Hill Street and Ridgeway Road  
Duluth, Gwinnett County, Georgia  
PGC Project No. 115340

Dear Mr. Kelley:

Piedmont Geotechnical Consultants, Inc. (PGC) is pleased to provide this letter report summarizing the findings of the Limited Phase II Environmental Site Assessment (ESA) conducted for the above referenced project. The objective of the Limited Phase II ESA was to investigate the potential for impacts to groundwater beneath the subject property due to historical land uses of nearby commercial properties. The Limited Phase II activities were conducted in accordance with proposal number PE15102, dated December 22, 2015.

## **Project Information**

The subject property is located immediately to the west of the intersection of Hill Street and Ridgeway Road in Duluth, Gwinnett County, Georgia. No address is listed for the subject property. The subject property consists of one parcel (Property ID: R6293-020) which has a reported area of 3.46 acres. The subject property generally consists of cleared grass covered land.

The northwest property line of the subject property is bordered by Ridge Towne Place. Multi-family residential structures are located further to the northwest. The northeast property line of the subject property is bordered by Ridgeway Road. A paved parking

area and wooded land are located further to the northeast. The southeast property line of the subject property is bordered by Hill Street. The Duluth City Hall and Duluth Cemetery are located further to the southeast. The southwest property line is bordered by Parkridge Lane. A commercial property including multiple businesses (listed in Section 5.0) is located further to the southwest.

### **Phase I Environmental Site Assessment Findings**

The Phase I ESA (PGC No. 115340, December 14, 2015) identified the following two off-site recognized environmental conditions (RECs):

- EDR "B6" – Duluth Drycleaners (RCRA-NonGen)  
EDR "B7" and "C9" – Former Duluth Drycleaners (US Brownfields, SHWS)
  - The Former Duluth Drycleaners site at 3146 Main Street is located approximately 400 feet to the east-southeast of the subject property.
  - From 1975 to 1993 the site reportedly operated as a dry cleaner. The dry cleaners closed in 1993 and the existing building was used to operate a woodworking shop from 1993 to 1998. In 1998, the woodworking operation ceased to operate and the building was demolished and converted into a parking lot.
  - The City of Duluth has purchased the site, retained a consultant (Wench Associates) and performed a limited site investigation. The results of the limited site investigation documented that tetrachloroethene (PCE) concentrations in groundwater range from 33 ug/L to 4,300 ug/L.
  - The most recent investigation at the Former Duluth Drycleaners was completed in October of 2015. Ms. Katie Ross with Wench and Associates (the City of Duluth's environmental consultant) provided PGC with a Summary of Groundwater Analytical Results and a Potentiometric Surface Map.
  - Groundwater samples were collected from four temporary monitor wells. Tetrachloroethene (PCE) was detected in all of the wells and ranged in concentration from 600 ug/L to 15,000 ug/L. In addition, benzene was detected in three of the four wells and ranged from 7.8 ug/L to 12 ug/L.
  - The Potentiometric Surface Map indicates groundwater flow direction is to the west, which is toward the subject property.

Based on the distance from the subject property, reported groundwater flow direction, ongoing groundwater assessments, and significant reported impacts to groundwater with chlorinated solvents, it is PGC's professional opinion that the Former Duluth Drycleaners site represents a recognized environmental condition (REC).

- EDR “D19” – Proctor Square and Duluth Corners Shopping Center (Brownfields)
  - The Proctor Square and Duluth Corners Shopping Center site at 3106 Buford Highway is located approximately 1,200 feet to the southeast of the subject property.
  - In May 2006 a prospective purchaser/lender retained Environmental Technology Resources, Inc. (ETRI) to complete a Phase II ESA on the property. Two groundwater samples were collected for laboratory analysis. The maximum concentration of tetrachloroethene (PCE) was reportedly detected at 250 ug/L, which is above the EPA MCL of 5 ug/L.
  - On July 13, 2007, three additional groundwater wells were installed and samples were collected for laboratory analysis. The maximum concentration of PCE was reportedly detected at 7,600 ug/L and the determination was made that groundwater flows to the north-northwest (which is toward the subject property).
  - The EPD recommended the Proctor Square and Duluth Corners Shopping Center be placed on the Hazardous Site Inventory list.

Based on the reported groundwater flow direction and impacts to groundwater with a chlorinated solvent, it is PGC’s professional opinion that the Proctor Square and Duluth Corners Shopping Center site represents a REC.

### **Field Investigation/Installation of Groundwater Monitor Wells**

PGC recommended the installation of five groundwater monitor wells on the Hill Street site to investigate potential impacts to groundwater with chlorinated solvents (dissolved phase) beneath the subject property. The City of Duluth, which owns both the subject property and the Former Duluth Drycleaners site, requested two of the five proposed groundwater monitor wells be permanently installed so additional data can be collected in the future.

On January 11, 2016, a drill rig was mobilized to the site to install the groundwater monitor wells. Prior to mobilizing to the site, the drilling equipment was pressure washed. The boreholes were drilled using a 3.25-inch inner diameter (ID) hollow-stem auger. A PGC representative observed the installation of the temporary monitor wells. The two permanent groundwater monitor wells are designated MW-01 and MW-02. The three temporary groundwater monitor wells are designated TMW-03, TMW-04, and TMW-05. The locations of the five groundwater monitor wells are presented on the attached Sample Location Map.

The groundwater monitor wells were installed with the bottom of the slotted well screen section placed 7 to 9 feet beneath the depth at which groundwater was encountered at the time of drilling. The monitor wells were constructed of threaded two-inch diameter PVC

slotted well screen and casing. Ten-foot sections of well screen were used to construct each temporary well. No PVC glues were used for the construction of these temporary wells. Boring depths and groundwater elevations (in feet) are summarized in the following Table.

	MW-01	MW-02	TMW-03	TMW-04	TMW-05
Ground Surface Elevation*	1071	1068	1065	1065.5	1065.5
Bottom of Well Elevation*	1046	1052	1050	1050.5	1045.5
Bottom of Well Depth**	25	16	15	15	20
Groundwater Elevation*	1057.9	1060.3	1064.5	1062.5	1060.5
Groundwater Depth**	13.1	7.7	0.5	3	5

\* Elevations obtained from 2014 USGS Topographic Maps are approximate; measured in feet above sea level.

\*\* Depths measured in feet below ground surface.

Five to ten gallons of water were removed using dedicated disposable bailers to develop each of the groundwater monitor wells. The two permanent groundwater monitor wells (MW-01 and MW-02) were fitted with an above-grade steel casing and padlock.

The five groundwater monitor wells were sampled using dedicated disposable bailers. The groundwater samples, designated MW-01, MW-03, TMW-03, TMW-04, and TMW-05, were transferred to sample containers provided by the analytical laboratory. The samples were placed in coolers and packed with ice to preserve the samples.

On January 13 2016, a PGC representative transported the five groundwater samples under chain of custody to Analytical Services, Inc. located in Norcross, Georgia. The five groundwater samples were analyzed for volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs) using EPA Method 8260B and 8270D, respectively.

### **Analytical Results**

Chloroform was detected in groundwater sample TMW-04 at a concentration of 4.8 ug/L. The Primary Maximum Contaminant Levels (MCL) for Drinking Water (Rule 391-3-5-.18) for chloroform is 470.8 ug/L.

No other VOCs or SVOCs were detected in the groundwater samples. The analytical results for the five groundwater samples are provided as an attachment.

No other analytes were detected in the groundwater samples collected from the five groundwater monitor wells.

### **Groundwater Flow**

Groundwater elevation data recorded during our investigation was used to calculate an approximate groundwater flow direction at the subject property. The groundwater flow direction was determined to be in a westerly direction. A Potentiometric Surface Map is provided as an attachment.

### **Conclusions**

The concentration of chloroform detected in the groundwater sample collected from TMW-04 (4.8 ug/L) is well below the listed Maximum Contaminant Level (470.8 ug/L). PGC has no further recommendations for additional Phase II activities.

PGC appreciates the opportunity to work with you on this project. Please feel free to contact us if you have any questions regarding our report or if we can be of additional service.

Sincerely,

**Piedmont Geotechnical Consultants, Inc.**

## Legend

### Definition of Laboratory Terms

- ND** - None Detected at the Reporting Limit
- TIC** - Tentatively Identified Compound
- CFU** - Colony Forming Units
- SOP** - Method run per ASI Standard Operating Procedure
- RL** - Reporting Limit
- DF** - Dilution Factor
- \* - Analyte not included in the NELAC list of certified analytes.

### Sample Information

N-Nitrosodiphenylamine breaks down to diphenylamine in the GCMS; both analytes are reported as N-Nitrosodiphenylamine. ASI is not NELAC certified for diphenylamine.

Phthalic acid and phthalic anhydride are reported as dimethyl phthalate

Maleic acid and maleic anhydride are reported as dimethyl malate

1,2-Diphenylhydrazine breaks down to azobenzene in the GCMS; both analytes are reported as azobenzene

### Definition of Qualifiers

- S-04** The surrogate recovery for this sample is outside of established control limits due to a suspected sample matrix effect.
- QR-02** The RPD result exceeded the QC control limits; however, both percent recoveries were acceptable. Sample results for the QC batch were accepted based on percent recoveries.

**Note: Unless otherwise noted, all results are reported on an as received basis.**

## LOG-IN CHECKLIST

Printed: 1/22/2016 3:20:44PM

Attn: Mr. Kyle McKinney

Client: Piedmont Geotechnical Consultants, Inc.

Project: Hill

Date Received: 01/13/16 15:05

Work Order: AZA0273

Logged In By: Mohammad M. Rahman

### OBSERVATIONS

#Samples: 5

#Containers: 25

Minimum Temp(C): 6.0

Maximum Temp(C): 6.0

Custody Seal(s) Used: Yes

### CHECKLIST ITEMS

COC included with Samples	YES
Sample Container(s) Intact	YES
Chain of Custody Complete	YES
Sample Container(s) Match COC	YES
Custody seal Intact	YES
Temperature in Compliance	YES
Sufficient Sample Volume for Analysis	YES
Zero Headspace Maintained for VOA Analyses	YES
Samples labeled preserved (If Applicable)	YES
Samples received within Allowable Hold Times	YES
Samples Received on Ice	YES
Preservation Confirmed	YES

Comments:

Notes:  
 Begin pumping @ 10:33. Initial turb. is high - cloudy grey/orange. Turb during readings was "0.00" flushing. Visual of actual water is that NTU is high. Color is very cloudy. Purge container full @ 7. gal. go empty. Back at well and pump is not working. replace monsoon motor. call MR because controller will not pump. Begins pumping. put pump back in well. controller stops again. 11:30. over. →

11:35 Call AIR. They're going to bring a couple replacement batteries.  
So I can purge the last volume (3.6 gal.)

12:34 AIR onsite w/ 2 new batteries.

12:35 begin pumping 3rd well volume

## Legend

---

---

### Definition of Laboratory Terms

**ND** - None Detected at the Reporting Limit

**TIC** - Tentatively Identified Compound

**CFU** - Colony Forming Units

**SOP** - Method run per Pace Standard Operating Procedure

**RL** - Reporting Limit

**DF** - Dilution Factor

\* - Analyte not included in the NELAC list of certified analytes.

### Sample Information

N-Nitrosodiphenylamine breaks down to diphenylamine in the GCMS; both analytes are reported as N-Nitrosodiphenylamine. Pace is not NELAC certified for diphenylamine.

Phthalic acid and phthalic anhydride are reported as dimethyl phthalate

Maleic acid and maleic anhydride are reported as dimethyl malate

1,2-Diphenylhydrazine breaks down to azobenzene in the GCMS; both analytes are reported as azobenzene

### Definition of Qualifiers

**Note: Unless otherwise noted, all results are reported on an as received basis.**

**LOG-IN CHECKLIST**

**Printed: 8/8/2016 6:38:41PM**

**Attn:** Ms. Katie Ross

**Client:** WENCK Associates  
**Project:** Duluth, City of  
**Date Received:** 08/01/16 15:45

**Work Order:** AZH0013  
**Logged In By:** Charles Hawks

**OBSERVATIONS**

**#Samples:** 9                      **#Containers:** 27  
**Minimum Temp(C):** 6.0            **Maximum Temp(C):** 6.0                      **Custody Seal(s) Used:** No

**CHECKLIST ITEMS**

- COC included with Samples                      YES
- Sample Container(s) Intact                      YES
- Chain of Custody Complete                      YES
- Sample Container(s) Match COC                      YES
- Custody seal Intact                      NO
- Temperature in Compliance                      YES
- Sufficient Sample Volume for Analysis                      YES
- Zero Headspace Maintained for VOA Analyses                      YES
- Samples labeled preserved (If Applicable)                      YES
- Samples received within Allowable Hold Times                      YES
- Samples Received on Ice                      YES
- Preservation Confirmed                      YES
